

Prop 65. Note

With this note we want to inform you about our position under the Californian “Safe Drinking Water and Toxic Enforcement Act” or Proposition 65.

Prop 65 requires businesses that supply products to the state of California to provide warnings about significant exposures to chemicals that cause cancer, birth defects or other reproductive harm.

We do not export products to California, Prop. 65 does therefore not apply to us. However, because some of our products may end-up on the Californian market through our customers we want to provide our customers with the best information from our supply chain currently available to us.

Substances in Prop 65 (October 2018) are not intentionally used or added in our raw materials, with the exception of styrene (CAS-no 100-42-5) and 1,3-butadiene (106-99-0). These monomers are used in the production of styrene ethylene butylene styrene (SEBS) copolymer polymers. Residual concentrations are typically below 1 mg/kg.

Although other Prop 65 substance(s) are to our knowledge not intentionally used in or added to our raw materials, the absence has not been checked by tests and the presence of traces/ impurities cannot be excluded.

In case of any questions, please contact our compliance officer:
